User Manual: *Setting Up Mail*

Setting Up Mail

The screenshot shows a 'Mail' configuration form. It is divided into two main sections: 'Mail' and 'Message body:'. The 'Mail' section contains several input fields: 'To:' (me@example.com), 'From:' ([your-name] <[your-email]>), 'Subject:' ([your-subject]), 'Additional headers:' (Cc: boss@example.com), and 'File attachments:'. There is a checkbox for 'Use HTML content type'. The 'Message body:' section contains a text area with the text: 'Message body: [your-message]', followed by a separator line '--' and the text: 'This mail is sent via contact form on MyCompany Blog http://example.com'. At the bottom, there is a 'Mail (2)' section with a checkbox for 'Use mail (2)'. Red circles with letters A through F are placed next to the following fields: A (To, From, Subject), B (Message body), C (Cc), D (File attachments), E (Use HTML content type), and F (Use mail (2)).

[A] Basic header fields (To, From and Subject): These are basic and necessary message header fields; and you can embed mail tags anywhere in these fields.

[B] Message body: This is the message body; you can embed mail tags anywhere in this field.

[C] Additional headers: You can insert additional message header fields here, such as Cc and Bcc. There should be one field per line. You can embed mail tags anywhere in these fields.

[D] File attachments: If you attach uploaded files to this mail, put mail tags for the uploaded files into this field.

[E] Use of HTML: By default, plain text is used for the message body. To use HTML, check this box.

[F] Mail (2): Mail (2) is yet another mail section, except that this is an optional section. Mail (2) works in completely the same manner as Mail.
